

Turning Data into Insight: Accessing CIHI data  
via the Custom Data Request Program  
June 2, 2015

Juliana Wu  
Manager, Decision Support Services (DSS)

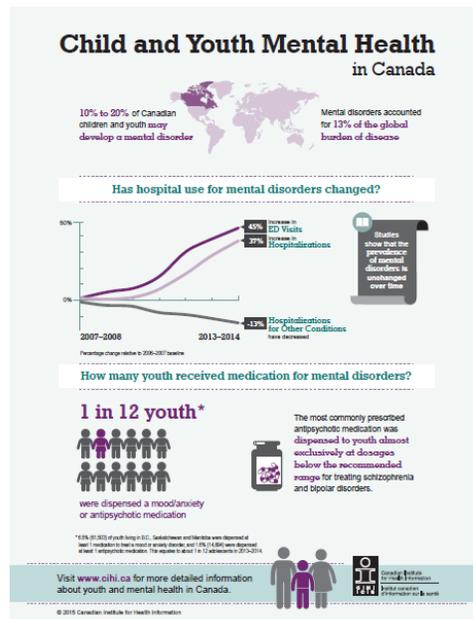

# Overview

- **CIHI Mandate:** To provide accurate and timely information required for sound health policy, effective management of the health system and to increase public awareness about factors affecting good health
- CIHI houses 28 databases of linkable health information
  - **Health care services:** hospital care, specialized services, community care, primary health care, pharmaceutical care
  - **Health spending:** by geography and by category
  - **Health workforce:** physicians, nurses, and other health care providers
  - **Patient oriented:** patient experience

# Uses of CIHI data

- eReporting tools to support performance measurement and health system management:
  - *Your Health System: [In Brief](#) and [In Depth](#)*
  - *eDAD, eNACRS*
  - *Quick Stats*

- Analytic Reports: annual and special topic analyses of health system priorities

# Accessing CIHI Data

## Publicly accessible data

Interactive reports and analytical tools	Analytical publications	Quick Stats
<p><b>Your Health System - In Brief and In Depth:</b> eReporting tools to support health system and performance measurement</p> <p><b>Wait Times:</b> Interactive report presents wait times as provinces work to meet benchmarks for priority procedures in Canada</p> <p><b>Patient Cost Estimator:</b> Interactive tool to provide estimates the average cost of various services provided in hospitals</p> <p><b>Indicator Library:</b> provides definitions, methodologies and the location of indicator results on CIHI's website</p>	<p><b>Published topic-specific analytical reports and products</b> present figures, graphs, tables and accompanying narratives</p>	<p><b>Quick Stats:</b> a series of free, publicly available, aggregate-level reports about Canada's health care statistics. Available in interactive and static formats.</p>

## Other Ways to access CIHI data

- Customized Data Requests: over 400 processed per year
- Graduate Student Data Access Program (GSDAP)
- Research Analytic Files (RAFs) via Statistics Canada's Data Liberation Initiative
- Media Requests and Releases

# Custom Data Request Program at CIHI

**The custom data request process is a key channel for providing access to CIHI data**

- CIHI's Data Access Strategy aims to enhance timeliness and accessibility of data for data users
- Through this process, CIHI provides access to its data holdings, many of which provide pan-Canadian coverage, and are linkable via patient identifiers
- Many data holdings house more than 10 years of data, providing excellent longitudinal perspective

# Custom Data Request Program at CIHI

Custom data needs are met by:

- Ad hoc data request process
  - CIHI staff work with each requestor to define data needs, develop specifications and extract data in a timely manner
  - Highly customized work, and involves significant amount of knowledge sharing with each requestor
- Data Sharing Agreements
  - Requesting organizations have ongoing need for CIHI data for a defined “program of work”
  - Expand the use / reach of CIHI data via these organizations’ use
  - Example: Statistics Canada, ICES, CCO, BORN Ontario

# Service Standards

CIHI is committed to the following service standards:

Complexity of Request	Turnaround Time	
	Aggregate Data	Record-Level Data
<b>Straightforward</b> Readily available data	10 days	20 days
<b>Complex</b> Requires moderate level of customization and/or data linkage	20 days	40 days
<b>Very complex</b> High level of customization and/or data linkage	To be negotiated with the requestor	

# Custom Data Request Program at CIHI

- In 2014-2015, CIHI completed 429 external data requests:

	Aggregate	Record Level
Standard	117	52
Complex	100	80
Very Complex	39	41
<b>Total</b>	<b>256</b>	<b>173</b>

# Custom Data Request Program at CIHI

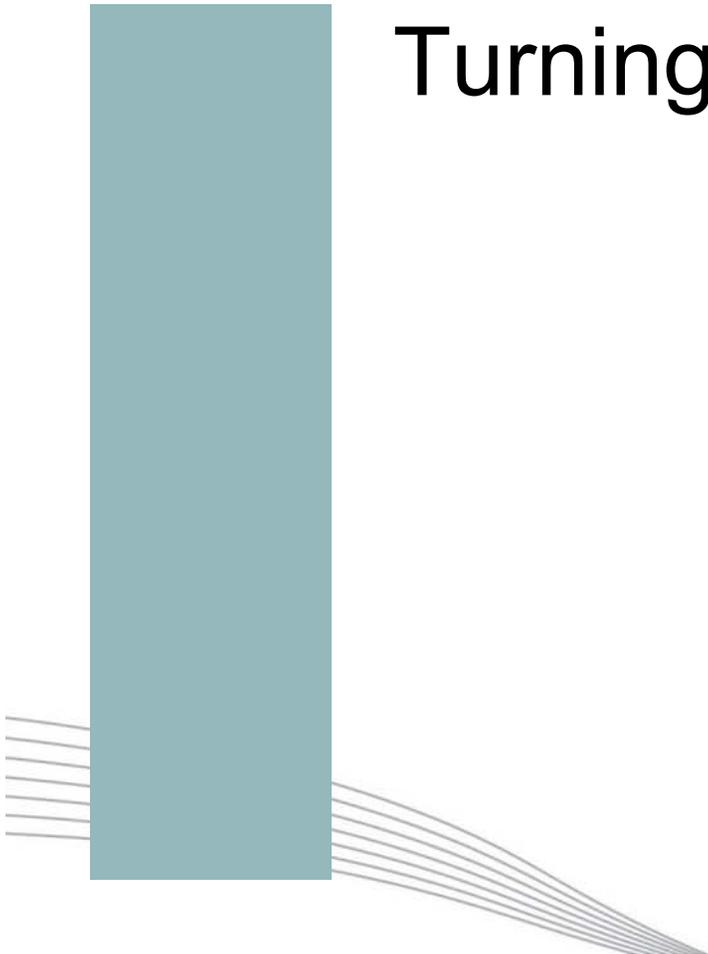

- This translates to over **200 organizations** having received custom data from CIHI in 2014-2015 via the data request process:

Requesting Organizations	Percent of custom requests
Health Delivery Organizations	33%
Government	30%
Academic Institutions / Researchers	16%
For-Profit	7%
Not-for-Profit	6%
Health Care Associations	3%
Other	4%

# Turning Data into Insight

# #1: Maternal and Neonatal data for BORN Ontario

Ongoing sharing of maternal and neonatal data with Better Outcomes Registry and Network (BORN), a maternal and child health registry, for its program of work including

- Validation of total number of births and stillbirths in BORN Information System (BIS)
- Comparison of rates of sixteen anomaly groups in the BIS and Niday Perinatal Database
- Evaluation of MOREOB Program Implementation in Ontario Hospitals
- The effect of H1N1 pandemic influenza illness on pregnancy outcomes: An ecological time-series study

Better Outcomes Registry & Network  
Registre et Réseau des Bons Résultats dès la naissance

## #2: Stroke Data for the Health and Stroke Foundation (HSF)

Purpose of this data request is to identify:

- patterns of stroke occurrence and locations where care is delivered in Canada
- changing trends in stroke occurrence across age groups and geographic regions over the past decade and anticipate future volumes
- elements of quality stroke care that can be used to compare to existing Canadian stroke benchmarks, and guide quality improvement efforts at the local and regional levels

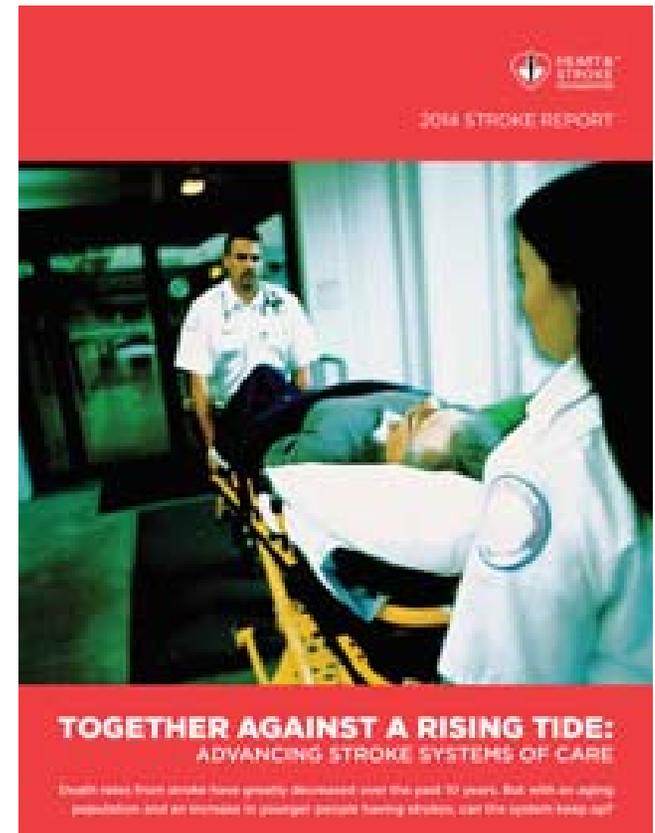

# Data and Linkage Method

- Linked ten years (2003-2004 to 2012-2013) of acute inpatient (DAD), ambulatory care (NACRS) and inpatient rehab (NRS) data
- The initial core stroke datasets were created from the DAD, NACRS, and NRS, using the stroke case definition provided by HSF
- Individuals with multiple hospitalization/ED/inpatient rehab records in the datasets were uniquely identified
- Episode of care defined by identifying the ED visits that are within 24 hours prior to the acute inpatient stroke hospitalization, and the inpatient rehab cases within 7 days of discharge from the acute inpatient stroke hospitalization

# Insight

## Key findings from HSF's 2014 Stroke Report

- Outcomes for stroke patients have improved, and prevention, care and treatment have also improved but the system is about to face more challenges than ever.
- Younger people are having strokes and this trend is expected to continue.
- Today's stroke patient is sicker with two-thirds having one or more chronic conditions, making treatment more complex.

## #3: Fractures and Osteoporosis

The purpose of this research project is to estimate the burden of osteoporosis associated with home care and long-term care in Canada.

The purpose of the requested data linkage is to

- track the paths of individuals with fractures through the healthcare system over time
- identify which fractures identified are osteoporosis-related, using acute inpatient and ambulatory care data, as well as the home care and continuing care assessment and medication records where available

# Data and Linkage Method

- Link 5 years (2007-2008 to 2011-2012) of DAD, NACRS, HCRS and CCRS data
- Core cohort composed of fractures in DAD, NACRS, HCRS and CCRS during the 5-year timeframe
- This core cohort file was linked back to the databases to identify other hospitalization/visit/HCC records for these individuals in that 5-year span, irrespective of whether the record had a recorded diagnosis of fracture.
- CIHI Case Mix Grouping Methodologies provided:
  - CMG+ 2011 (for acute inpatient records)
  - CACS 2011 (for emergency and day surgery records)
  - RUG-III-HC (for home care records)
  - RUG-III

# Insight

- Researchers reported that osteoporosis-related fractures were responsible for over 57,000 acute care admissions and over 830,000 hospitalized days in 2007-2008.
- Researchers used the resource intensity weights (RIW) to assign costs to hospital-stay admissions, emergency room visits, and same day surgeries.
- The costs associated with rehab and continuing care were calculated using average NRS and CCRS's RIWs.

Osteoporos Int (2012) 23:2591–2600  
DOI 10.1007/s00198-012-1931-z

# Summary

- CIHI data holdings provide enormous potential for longitudinal, patient-oriented analyses in a pan-Canadian setting
- CIHI's Data Request program provides data requestors with a combination of data-specific knowledge, methodological expertise, quality analytics, and efficient, low-cost service
- Many of the data releases had resulted in publications in major reports and scientific journals
  - stimulated national dialogue around opportunities for improvement at various points along the continuum of patient care
